

# General Specifications

## ROTAMASS Total Insight Coriolis Mass Flow and Density Meter Hygienic

GS 01U10B06-07-1900EN-R

### Rotamass Hygienic - For Food and beverage, biotechnological and pharmaceutical applications

#### Features and benefits

- Hygienic design, self-draining installation, possibilities sanitary approvals and compliances
- Precise flow rate measurement over wide flow range of liquids and gases, multi-phase fluids and liquid with gas content
- Improved measurement efficiency due to low pressure loss design for mass and volume flow, density and concentration measurement
- Batching function with batch leakage detection and batch control by transmitter for precise dosing
- Excellent density measurement and up to four advanced Concentration Measurement data sets
- Benefit from Viscosity function and capability to handle high viscous process fluids

#### Process Guard

Operation and Observation

- Meter Performance under wide process conditions
- Meter Verification in line by Tube Health Check function

# 1 Introduction

This specification provides overview about Rotamass Total Insight portfolio. Complete specification is available per product line.

## 1.1 About this General Specification

All available properties of the Rotamass Coriolis flow meter are specified by means of a model code.

One model code position may include several characters depicted by means of dashed lines.

The positions of the model code relevant for the respective properties are depicted and highlighted in blue. Any values that might occupy these model code positions are subsequently explained.

Fig. 1: Highlighted model code positions

A complete description of the model code is included in the chapter 8 *Ordering information* [ 74].

## 1.2 Applicable documents

<sup>1)</sup> The "\_" symbols are placeholder for the corresponding language version of the document (EN, DE, etc.).

The complete product documentation is stored on the microSD card delivered with the device and is available at:

- Yokogawa Customer Portal (<http://myportal.yokogawa.com/s/documents>)
- Yokogawa Device Lifecycle Management app

Please enter the serial number of the device or scan the QR code on the device.

### 1.3 Measuring system

The Rotamass Coriolis flow meter consists of:

- Sensor
- Transmitter

When the integral type is used, sensor and transmitter are firmly connected.

Fig. 2: Configuration of the Rotamass integral type

- |   |                     |
|---|---------------------|
| 1 | Transmitter         |
| 2 | Sensor              |
| 3 | Process connections |

When the remote type is used, sensor and transmitter are linked via connecting cable. As a result, sensor and transmitter can be installed in different locations.

Fig. 3: Configuration of the Rotamass remote type

- |   |                     |   |                     |
|---|---------------------|---|---------------------|
| 1 | Transmitter         | 4 | Sensor terminal box |
| 2 | Sensor              | 5 | Connecting cable    |
| 3 | Process connections |   |                     |

### 1.4 Transmitter

The sensor can be combined with different transmitters. The transmitter type is visible in the indicator.

**Essential Transmitter**

**Ultimate Transmitter**

| Model code position 1 | Transmitter type | Description        | Communication Interfaces                       |
|-----------------------|------------------|--------------------|--|
| E                     | Essential        | Basic functions    | HART, Modbus                                   |
| U                     | Ultimate         | Advanced functions | HART, Modbus, PROFIBUS PA, FOUNDATION Fieldbus |

Transmitter functions are described in detail in the Specification overview GS01U10B00-00\_ \_-R.

For details about available functions per transmitter type refer to chapter *Ordering information* [▶ 74].

## 2 Application and measuring ranges

In this chapter, all values related to pressure are gauge pressure values.

For process specific results, please refer to the FlowConfigurator online sizing and configuration tool: <http://www.FlowConfigurator.com>

### 2.1 Measured quantities

The Rotamass Coriolis flow meter can be used to measure the following fluids:

- Liquids
- Gases
- Mixtures, such as emulsions, suspensions, slurries

Possible limitations applying to measurement of mixtures must be checked with the responsible Yokogawa sales organization.

The following variables can be measured using Rotamass:

- Mass flow
- Density
- Temperature

Based on these measured quantities, the transmitter also calculates:

- Volume flow
- Partial component concentration of a two-component mixture
- Partial component flow rate of a mixture consisting of two components (net flow)

The net flow is calculated based on the known partial component concentration and the overallflow.

The mass flow, volume flow, net flow measurements can be bi-directional.

#### Measured quantities for NTEP custody transfer approval

Measurement variables for NTEP approval options /Q20 are:

- Mass flow unidirectional
- Volume flow unidirectional

2.2 Mass flow

For Rotamass Hygienic the following meter sizes to be determined using the *Model code description* [ 74] are available.

Mass flow of liquids

| Meter size  | Typical connection size | Q <sub>nom</sub><br>in t/h (lb/min) | Q <sub>max</sub><br>in t/h (lb/min) | Model code position 3 |
|-------------|-------------------------|-------------------------------------|-------------------------------------|-----------------------|
| Hygienic 25 | DN25, 1"                | 1.60 (59.00)                        | 2.30 (85.00)                        | 25                    |
| Hygienic 40 | DN40, 1½"               | 4.70 (170.00)                       | 7.00 (260.00)                       | 40                    |
| Hygienic 50 | DN50, 2"                | 20.00 (730.00)                      | 29.00 (1100.00)                     | 50                    |
| Hygienic 80 | DN80, 3"                | 51.00 (1900.00)                     | 76.00 (2800.00)                     | 80                    |

Mass flow measuring range for NTEP custody transfer approval

Tab. 1: Mass flow measuring ranges (/Q20)

| Meter size  | Q <sub>min</sub><br>in t/h (lb/min) | Q <sub>max</sub><br>in t/h (lb/min) |
|-------------|-------------------------------------|-------------------------------------|
| Hygienic 25 | 0.23(8.38)                          | 2.30 (83.78)                        |
| Hygienic 40 | 0.60 (22.05)                        | 6.00(220.46)                        |
| Hygienic 50 | 2.88 (105.82)                       | 28.80(1058.22)                      |
| Hygienic 80 | 6.00(220.46)                        | 60.00(2204.62)                      |

Q<sub>nom</sub> - Nominal mass flow

Q<sub>max</sub> - Maximum mass flow

Q<sub>min</sub> - Minimum mass flow

The nominal mass flow Q<sub>nom</sub> is defined as the mass flow of water (temperature: 20 °C) at 1 bar pressure loss along the flow meter.

Mass flow of gases

When using Rotamass for measuring the flow of gases, the mass flow is usually limited by the pressure loss generated and the maximum flow velocity.

| Type of gas            | Meter size              | Maximum flow velocity  |
|------------------------|-------------------------|------------------------|
| Oxygen                 | -                       | 60 m/s                 |
| Methane<br>Natural gas | Hygienic 25, 40, 50, 80 | 70 m/s                 |
| Other gases            | -                       | 33 % of sound velocity |

## 2.3 Pressure loss

The pressure loss along the flow meter is heavily dependent on the application. The pressure loss of 1 bar at nominal mass flow  $Q_{nom}$  also applies to water and is considered the reference value.

## 2.4 Density

| Meter size  | Measuring range of density<br>in kg/l (lb/ft <sup>3</sup> ) |
|-------------|---|
| Hygienic 25 | 0 – 5 (0 – 312)   |
| Hygienic 40 |   |
| Hygienic 50 |   |
| Hygienic 80 |   |

### Density measuring range for NTEP custody transfer approval

Tab. 2: Density measuring ranges (/Q20)

| Option | Measuring range of density<br>in kg/l (lb/ft <sup>3</sup> ) |
|--------|---|
| /Q20   | 0,9 – 1,1 (56 – 69)   |

### Density of gases

Rather than being measured directly, density of gas is usually calculated using its reference density, process fluid temperature and process pressure.

## 2.5 Process fluid temperature range

Allowed process fluid and ambient temperature ranges in hazardous areas depend on classifications defined by applications, refer to *Temperature specification in hazardous areas* [▶ 29].

For Rotamass Hygienic the following process fluid temperature ranges are available:

| Temperature range | Model code position 6 | Model code position 8 | Process fluid temperature<br>in °C<br>(°F) | Design type   | Model code position 10 |
|-------------------|-----------------------|-----------------------|--|---------------|------------------------|
| Standard          | HS2, HS9              | 0                     | -50 – 140<br>(-58 – 284)                   | Integral type | 0, 2                   |
|                   |                       |                       | -70 – 140<br>(-94 – 284)                   | Remote type   | A, E, J                |
|                   | HS4                   |                       | -10 – 140<br>(14 – 284)                    | Integral type | 0, 2                   |
|                   |                       |                       | Remote type                                | A, E, J       |                        |

### 3 Accuracy

In this chapter, maximum deviations are indicated as absolute values.

All accuracy data are given in ± values.

#### 3.1 Overview

##### Achievable accuracies for liquids

The value  $D_{flat}$  specified for accuracy of mass flow applies for flow rates exceeding the mass flow limit  $Q_{flat}$ . If the flow rate is less than  $Q_{flat}$ , other effects have to be considered.

If the flow rate is higher than  $Q_{nom}$ , other effects might influence the accuracy (e.g. cavitation).

The following values are achieved at calibration conditions when the device is delivered, see *Calibration conditions* [▶ 16].

| Measured quantity                 |                                   | Accuracy for transmitters        |                                    |
|-----------------------------------|-----------------------------------|----------------------------------|------------------------------------|
|                                   |                                   | Essential                        | Ultimate                           |
| Mass flow <sup>1)</sup>           | Accuracy <sup>2)</sup> $D_{flat}$ | 0.15 % of measured value         | 0.1 % of measured value            |
|                                   | Repeatability <sup>3)</sup>       | 0.08 % of measured value         | 0.05 % of measured value           |
| Volume flow (water) <sup>1)</sup> | Accuracy <sup>2)</sup> $D_v$      | 0.43 % of measured value         | 0.12 % of measured value           |
|                                   | Repeatability <sup>3)</sup>       | 0.22 % of measured value         | 0.06 % of measured value           |
| Density                           | Accuracy <sup>2)</sup>            | 4 g/l (0.25 lb/ft <sup>3</sup> ) | 0.5 g/l (0.03 lb/ft <sup>3</sup> ) |
|                                   | Repeatability <sup>3)</sup>       | 2 g/l (0.13 lb/ft <sup>3</sup> ) | 0.3 g/l (0.02 lb/ft <sup>3</sup> ) |
| Temperature                       | Accuracy <sup>2)</sup>            | 1.0 °C (1.8 °F)                  | 1.0 °C (1.8 °F)                    |

##### Achievable accuracies for gases

| Measured quantity                              |                                   | Accuracy for transmitters |                          |
|--|-----------------------------------|---------------------------|--------------------------|
|  |                                   | Essential                 | Ultimate                 |
| Mass flow / standard volume flow <sup>1)</sup> | Accuracy <sup>2)</sup> $D_{flat}$ | 0.75 % of measured value  | 0.35 % of measured value |
|  | Repeatability <sup>3)</sup>       | 0.6 % of measured value   | 0.28 % of measured value |
| Temperature                                    | Accuracy <sup>2)</sup>            | 1.0 °C (1.8 °F)           | 1.0 °C (1.8 °F)          |

<sup>1)</sup> Based on the measured values of the pulse output. This means that the flow accuracy and repeatability considers the combined measurement uncertainties including sensor, electronic and pulse output interface.

<sup>2)</sup> Best mass flow accuracy per transmitter type.

<sup>3)</sup> The stated repeatability is included in the accuracy.

#### 3.2 Zero point stability of the mass flow

In case of no flow, the maximum measured flow rate is called *Zero point stability*. Zero point values are shown in the table below.

| Meter size  | Zero point stability Z<br>in kg/h (lb/h) |
|-------------|--|
| Hygienic 25 | 0.032 (0.071)                            |
| Hygienic 40 | 0.094 (0.210)                            |
| Hygienic 50 | 0.40 (0.88)                              |
| Hygienic 80 | 2.55 (5.60)                              |

### 3.3 Mass flow accuracy

Above mass flow  $Q_{flat}$ , maximum deviation is constant and referred to as  $D_{flat}$ . It depends on the product version and can be found in the tables in chapter *Accuracy of mass flow and density according to the model code* [▶ 13].

Use the following formulas to calculate the maximum deviation  $D$ :

$$Q_m \geq Q_{flat} \rightarrow D = D_{flat}$$

$$Q_m < Q_{flat} \rightarrow D = \frac{a \times 100 \%}{Q_m} + b$$

$D$  Maximum deviation in %

$D_{flat}$  Maximum deviation for high flow rates in %

$Q_m$  Mass flow in kg/h

$Q_{flat}$  Mass flow value above which  $D_{flat}$  applies, in kg/h

$a, b$  Constants

| Meter size<br>( $Q_{nom}$ in kg/h) | Model code<br>position 9 | $D_{flat}$<br>in % | $Q_{flat}$<br>in kg/h | $a$<br>in kg/h | $b$<br>in % |
|------------------------------------|--------------------------|--------------------|-----------------------|----------------|-------------|
| Hygienic 25<br>(1600)              | E7                       | 0.2                | 54                    | 0.079          | 0.055       |
|                                    | D7                       | 0.15               | 64                    | 0.051          | 0.070       |

**Accuracy using water at 20 °C as an example**

Fig. 4: Schematic dependency of the maximum deviation on the mass flow

$D$  Maximum deviation in %  $Q_m$  Mass flow in kg/h  
 $Q_{nom}$  Nominal mass flow in kg/h  $Q_{flat}$  Mass flow above which  $D_{flat}$  applies, in kg/h

**3.4 Accuracy of density**

**3.4.1 For liquids**

| Meter size  | Transmitter | Maximum deviation of density <sup>1)</sup><br>in g/l (lb/ft <sup>3</sup> ) |
|-------------|-------------|--|
| Hygienic 25 | Essential   | Down to 4 (0.25)   |
| Hygienic 40 |             |  |
| Hygienic 50 |             |  |
| Hygienic 80 |             |  |
| Hygienic 25 | Ultimate    | Down to 0.5 (0.03)   |
| Hygienic 40 |             |  |
| Hygienic 50 |             |  |
| Hygienic 80 |             |  |

<sup>1)</sup> Deviations possible depending on product version (type of calibration)

The maximum deviation depends on the product version selected, see also *Accuracy of mass flow and density according to the model code [13]*.

**3.4.2 For gases**

In most applications, density at standard conditions is programmed into the transmitter and used to calculate the standard volume flow based on mass flow.

If gas pressure is a known value, after entering a reference density, the transmitter is able to calculate gas density from temperature and pressure as well (while assuming an ideal gas).

Alternatively, gas density can be measured. In order to do so, it is necessary to adapt the lower density limit value in the transmitter.

For most applications the direct measurement of the gas density will have less accuracy as stated for liquids.

### 3.5 Accuracy of mass flow and density according to the model code

Accuracy for flow rate as well as density is selected via model code position 9. Here a distinction is made between devices for measuring liquids and devices for measuring gases. No accuracy for density measurement is specified for gas measurement devices.

#### 3.5.1 For liquids

##### Essential

| Model code position 9 | Maximum deviation of density <sup>1)</sup> in g/l | Maximum deviation $D_{flat}$ for mass flow in % |             |             |             |
|-----------------------|---|---|-------------|-------------|-------------|
|                       |   | Hygienic 25                                     | Hygienic 40 | Hygienic 50 | Hygienic 80 |
| E7                    | 4   | 0.2   | 0.2         | 0.2         | 0.2         |
| D7                    | 4   | 0.15  | 0.15        | 0.15        | 0.15        |

<sup>1)</sup> Specified maximum deviation is achieved within the applicable measuring range for density.

##### Ultimate

| Model code position 9 | Maximum deviation of density <sup>1)</sup> in g/l | Maximum deviation $D_{flat}$ for mass flow in % |             |             |             |
|-----------------------|---|---|-------------|-------------|-------------|
|                       |   | Hygienic 25                                     | Hygienic 40 | Hygienic 50 | Hygienic 80 |
| E7                    | 4   | 0.2   | 0.2         | 0.2         | 0.2         |
| D7                    | 4   | 0.15  | 0.15        | 0.15        | 0.15        |
| C7 <sup>2)</sup>      | 4   | 0.1   | 0.1         | 0.1         | 0.1         |
| C3                    | 1   | 0.1   | 0.1         | 0.1         | 0.1         |
| C2 <sup>2),3)</sup>   | 0.5   | 0.1   | 0.1         | 0.1         | 0.1         |

<sup>1)</sup> Specified maximum deviation is achieved within the applicable measuring range for density.

<sup>2)</sup> Notice: In case of a spare sensor combined with a transmitter in use, the original accuracy specification may be affected. For calibration services, please contact Yokogawa Service department.

<sup>3)</sup> Specified deviation of density is achieved within the following limits, see table below:

|                                      | Limits for density specific $D_{flat}$ for mass flow |             |             |             |
|--------------------------------------|--|-------------|-------------|-------------|
|                                      | Hygienic 25  | Hygienic 40 | Hygienic 50 | Hygienic 80 |
| $Q_{min}$ of C2 in kg/h              | 160  | 470         | 700         |             |
| Ambient temperature range in °C (°F) | -10 – 50 (14 – 122)                                  |             |             |             |

3.5.2 For gases

Essential

| Model code position 9 | Maximum deviation $D_{flat}$ for mass flow in % |
|-----------------------|---|
| 70                    | 0.75  |

Ultimate

| Model code position 9 | Maximum deviation $D_{flat}$ for mass flow in % |
|-----------------------|---|
| 50 <sup>1)</sup>      | 0.5   |
| 30 <sup>1)</sup>      | 0.35  |

<sup>1)</sup> Notice: In case of a spare sensor combined with a transmitter in use, the original accuracy specification may be affected. For calibration services, please contact Yokogawa Service department.

3.6 Volume flow accuracy

3.6.1 For liquids

The following formula can be used to calculate the accuracy of liquid volume flow:

$$D_v = \sqrt{D^2 + \left(\frac{\Delta\rho}{\rho} \times 100\%\right)^2}$$

- $D_v$  Maximum deviation of volume flow in %
- $\Delta\rho$  Maximum deviation of density in kg/l
- $D$  Maximum deviation of mass flow in %
- $\rho$  Density in kg/l

3.6.2 For gases

Accuracy of standard volume flow for gas with a fixed reference density equals the maximum deviation  $D$  of the mass flow.

$$D_v = D$$

The specified accuracy is then only valid for reference gas density. Gas composition changes can have different reference density leading to accuracy deviation.

### 3.7 Accuracy of temperature

Accuracy of temperature depends on the sensor temperature range selected (see *Process fluid temperature range* [► 9]) and can be calculated as follows:

**Formula for specified temperature range *Standard***

$$\Delta T = 1.0 \text{ }^{\circ}\text{C} + 0.0075 \times |T_{\text{pro}} - 20 \text{ }^{\circ}\text{C}|$$

$\Delta T$  Maximum deviation of temperature

$T_{\text{pro}}$  Process fluid temperature in  $^{\circ}\text{C}$  measured by Rotamass Total Insight

Fig. 5: Presentation of temperature accuracy

### 3.8 Repeatability

#### For liquids

When using default damping times, the specified repeatability of mass flow, density and temperature measurements equals half of the respective maximum deviation.

$$R = \frac{D}{2}$$

$R$  Repeatability

$D$  Maximum deviation

#### For gases

In deviation hereto, the following applies to mass and standard volume flow of gases:

$$R = \frac{D}{1.25}$$

### 3.9 Calibration conditions

#### 3.9.1 Mass flow calibration and density adjustment

The calibration laboratory at Rota Yokogawa is accredited according to DIN EN ISO/IEC 17025:2018. All Rotamass are calibrated in accordance with standard calibration procedure and each device comes with a standard calibration certificate. Optionally, a 5 point-calibration (option K2) or a 10 point-calibration with DAkkS calibration certificate (option K5) can be performed .

Each Rotamass device comes with a standard calibration certificate.

Calibration takes place at reference conditions. Specific values are listed in the standard calibration certificate.

|                             | Reference conditions  |
|-----------------------------|---|
| Fluid                       | Water   |
| Density                     | 0.9 – 1.1 kg/l (56 – 69 lb/ft <sup>3</sup> )                      |
| Fluid temperature           | 10 – 35 °C (50 – 95 °F)<br>Average temperature: 22,5 °C (72.5 °F) |
| Ambient temperature         | 10 – 35 °C (50 – 95 °F)   |
| Process pressure (absolute) | 1 – 5 bar (15 – 73 psi)   |

The accuracy specified is achieved at as-delivered calibration conditions stated.

#### 3.9.2 Density calibration

Density calibration is performed for maximum deviation of 0.5 g/l (0.03 lb/ft<sup>3</sup>), (model code pos. 9: C2 or D2).

Density calibration includes:

- Determination of calibration constants for fluid densities at 0.7 kg/l (44 lb/ft<sup>3</sup>), 1 kg/l (62 lb/ft<sup>3</sup>) and 1.65 kg/l (103 lb/ft<sup>3</sup>) at 20 °C (68 °F) fluid temperature
- Check of results for fluid densities at 0.7 kg/l (44 lb/ft<sup>3</sup>), 1 kg/l (62 lb/ft<sup>3</sup>) and 1.65 kg/l (103 lb/ft<sup>3</sup>) at 20 °C (68 °F) fluid temperature
- Creation of density calibration certificate

#### 3.9.3 Calibration for gases

Same calibration conditions described in *Mass flow calibration and density adjustment* [▶ 16] apply for gas measurement according to AGA11 water calibration transferability<sup>1)</sup>. Specifications are determined based on evaluation at accredited ISO/IEC17025 calibration at following conditions:

| Terms             | Reference conditions                      |
|-------------------|---|
| Fluid             | Natural Gas                               |
| Fluid temperature | 20 °C (68 °F)                             |
| Process pressure  | 16 barg (232 psig) and 50 barg (725 psig) |

Different gases can be considered by entering characteristic gas sound velocity and related temperature coefficient<sup>1)</sup>.

<sup>1)</sup> Only with Rotamass Total Insight HART firmware rev.4 or later. For details please contact your local Yokogawa sales organization.

### 3.10 Process conditions

For process specific results, please refer to the FlowConfigurator online sizing and configuration tool: <http://www.FlowConfigurator.com>

#### 3.10.1 Process pressure effect

Process pressure effect is defined as the change in sensor flow and density deviation due to process pressure change away from 1 barg reference condition. This effect can be corrected by dynamic pressure input or a fixed process pressure.

Tab. 3: Process pressure effect

| Meter size  | Deviation of Flow    |                      | Deviation of Density |                |
|-------------|----------------------|----------------------|----------------------|----------------|
|             | in % of rate per bar | in % of rate per psi | in g/l per bar       | in g/l per psi |
| Hygienic 25 | -0.0020              | -0.00014             | -0.021               | -0.0015        |
| Hygienic 40 | -0.0084              | -0.00058             | -0.151               | -0.0104        |
| Hygienic 50 | -0.0109              | -0.00075             | -0.073               | -0.0050        |
| Hygienic 80 | -0.0130              | -0.0009              | -0.091               | -0.0063        |

#### 3.10.2 Process fluid temperature effect

For mass flow and density measurement, process fluid temperature effect is defined as the change in sensor flow and density accuracy due to process fluid temperature change away from 20°C reference condition. For temperature ranges, see *Process fluid temperature range* [ 9].

##### Temperature effect on Zero

Temperature effect on Zero of mass flow can be corrected by zeroing at the process fluid temperature.

##### Temperature effect on mass flow

The process fluid temperature is measured and the temperature effect compensated. However due to uncertainties in the compensation coefficients and in the temperature measurement an uncertainty of this compensation is left. The typical rest error of Rotamass Total Insight temperature effect on mass flow is:

Tab. 4: All models

| Temperature range | Uncertainty of flow                             |
|-------------------|---|
| Standard          | ±0.0009 % of rate / °C (±0.0005 % of rate / °F) |

The temperature used for calculation of the uncertainty is the difference between process fluid temperature and the temperature 20°C reference condition.

Temperature effect on density measurement (liquids)

Process fluid temperature influence:

Formula for metric values

$$D'_\rho = \pm k \times \text{abs}(T_{\text{pro}} - 20 \text{ }^\circ\text{C})$$

Formula for imperial values

$$D'_\rho = \pm k \times \text{abs}(T_{\text{pro}} - 68 \text{ }^\circ\text{F})$$

- $D'_\rho$  Additional density deviation due to the effect of fluid temperature in g/l (lb/ft<sup>3</sup>)
- $T_{\text{pro}}$  Process fluid temperature in °C measured by Rotamass Total Insight
- $k$  Constant for temperature effect on density measurement in g/l × 1/°C (lb/ft<sup>3</sup> × 1/°F)

Tab. 5: Constants for particular meter size and model code position (see also *Process fluid temperature range* [ 9] and *For liquids* [ 13])

| Meter size  | Model code position 4 | Model code position 8 | Model code position 9 | $k$ in g/l × 1/°C (lb/ft <sup>3</sup> × 1/°F) |
|-------------|-----------------------|-----------------------|-----------------------|---|
| Hygienic 25 | S                     | 0                     | C3, C7, D7, E7        | 0.21 (0.0073)                                 |
|             |                       |                       | C2                    | 0.041 (0.0014)                                |
| Hygienic 40 |                       |                       | C3, C7, D7, E7        | 0.14 (0.0049)                                 |
|             |                       |                       | C2                    | 0.027 (0.0009)                                |
| Hygienic 50 |                       |                       | C3, C7, D7, E7        | 0.12 (0.0042)                                 |
|             |                       |                       | C2                    | 0.025 (0.0009)                                |
| Hygienic 80 |                       |                       | C3, C7, D7, E7        | 0.13 (0.0045)                                 |
|             |                       |                       | C2                    | 0.025 (0.0009)                                |

### 3.11 Analog output specification

#### Analog output specification *I<sub>out</sub>*

If mass- or volume flow, density, temperature, pressure or concentration is measured via current output *I<sub>out</sub>* two additional deviation effects have to be taken into account.

- The *I<sub>out</sub>* –base specification  $\Delta I_{\text{base}}$  contains all combined effects of output adjustment, linearity, power supply variation, load resistance variation, short and long term drift for one year.
- The *I<sub>out</sub>* –ambient temperature specification  $\Delta I(T_{\text{amb}})$  gives an additional deviation effect if the ambient temperature of the transmitter differs from 20 °C.

Both additional output deviation effects have to be added to the basic mass- or volume flow, density, temperature, pressure or concentration deviation. They are based on a 95 % ( $2\sigma$ ) confidence level.

#### Deviation of mass- or volume flow, density, temperature, pressure or concentration by *I<sub>out</sub>*

The following formula can be used to calculate the deviation of mass- or volume flow:

$$D_i = \sqrt{D^2 + \left( \frac{\Delta I_{\text{base}}}{I(Q)} \times 100 \% \right)^2 + \left( \frac{\Delta I(T_{\text{amb}})}{I(Q)} \times 100 \% \right)^2}$$

|                            |   |
|----------------------------|---|
| $D_i$                      | Maximum deviation of mass- or volume flow, density, temperature, pressure or concentration by <i>I<sub>out</sub></i> in %   |
| $D$                        | Maximum deviation of mass- or volume flow, density, temperature, pressure or concentration <sup>1)</sup> by pulse/frequency output in %   |
| $I(Q)$                     | <i>I<sub>out</sub></i> depending on mass- or volume flow, density, temperature, pressure or concentration in $\mu\text{A}$  |
| $\Delta I_{\text{base}}$   | Maximum deviation of <i>I<sub>out</sub></i> by combined effects<br>$\Delta I_{\text{base}} = a \times I(Q) + b$   |
| $\Delta I(T_{\text{amb}})$ | Maximum deviation of <i>I<sub>out</sub></i> by deviation of the transmitter ambient temperature from 20 °C<br>$\Delta I(T_{\text{amb}}) = (c \times I(Q) + d) \times (T - 20 \text{ °C})$ |
| $a, b, c, d$               | Constants   |

| Description   | Model code pos. 13                                     | a in ppm | b in $\mu\text{A}$ | c in ppm/°C | d in $\mu\text{A}/\text{°C}$ |
|---|--|----------|--------------------|-------------|------------------------------|
| Non-intrinsically safe <i>I<sub>out</sub></i> (active or passive) | JA, JB, JC, JD, JE, JF, JG, JH, JJ, JK, JL, JM, JN, M6 | 170      | 2.3                | 7           | 0                            |
| Intrinsically safe <i>I<sub>out</sub></i> (passive)               | JP, JQ, JR, JS   |          |                    |             | 0.06                         |

<sup>1)</sup>Formula or value for accuracy of specific output parameter, please see chapters:

## 4 Operating conditions

### 4.1 Location and position of installation

Rotamass Coriolis flow meters can be mounted horizontally, vertically and at an incline. The measuring tubes should be completely filled with the fluid during flow measurement as accumulations of air or formation of gas bubbles in the measuring tube may result in errors in measurement. Straight pipe runs at inlet or outlet are usually not required.

Avoid the following installation locations and positions:

- Measuring tubes as highest point in piping when measuring liquids
- Measuring tubes as lowest point in piping when measuring gases
- Immediately in front of a free pipe outlet in a downpipe
- Lateral positions

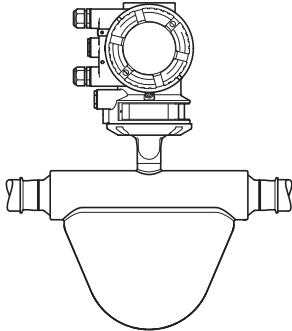

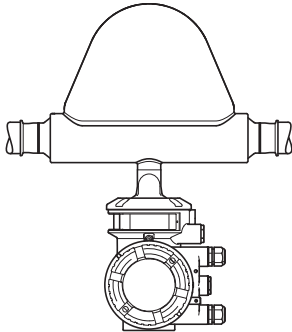

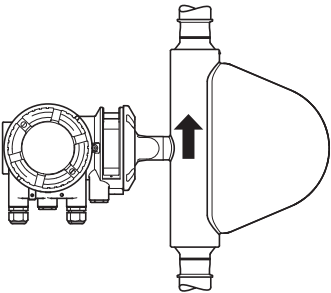

Fig. 6: Installation position to be avoided: Flow meter in sideways position

#### 4.1.1 Sensor installation position

Sensor installation position as a function of the fluid

| Installation position  | Fluid  | Description   |
|--|--------|---|
| Horizontal, measuring tubes at bottom<br> | Liquid | The measuring tubes are oriented toward the bottom. Accumulation of gas bubbles is avoided.             |
| Horizontal, measuring tubes at top<br>    | Gas    | The measuring tubes are oriented toward the top. Accumulation of liquid, such as condensate is avoided. |

| Installation position  | Fluid      | Description   |
|--|------------|---|
| Vertical, direction of flow towards the top (recommended)<br> | Liquid/gas | The sensor is installed on a pipe with the direction of flow towards the top. Accumulation of gas bubbles or solids is avoided. This position allows for complete self-draining of the measuring tubes. |

## 4.2 Process conditions

The pressure and temperature ratings presented in this section represent the design values for the devices. For individual applications (e.g. marine applications with option MC\_) further limitations may apply according to the respective applicable regulations. For details see chapter *Application and industry related standards* [▶ 68] under the heading Marine approvals.

In this chapter, all values related to pressure are gauge pressure values.

### 4.2.1 Pressure

The maximum allowed process pressure depends on the selected process connection and process temperature.

The given process temperature and process pressure ranges are calculated and approved without corrosion or erosion effects.

The following diagrams shows the process pressure as a function of process temperature as well as the process connection used (type and size of process connection).

Calculations for ASME flanges are based on ASME B16.5 Material group 2.2 (316/316L dual certified).

**Threaded connection according to DIN 11851**

Fig. 7: Allowed process pressure as a function of process connection temperature

- 1 Threaded connection compatible to DIN 11851 up to DN40
- 2 Threaded connection compatible to DIN 11851 from DN50 to DN100

**Threaded connection according to SMS1145**

Fig. 8: Allowed process pressure as a function of process connection temperature

- 1 Threaded sanitary connection for SMS1145 up to DN40
- 2 Threaded sanitary connection for SMS 1145 from DN50 up to DN80

**Clamp process connection according to DIN 32676 series A**

Fig. 9: Allowed process pressure as a function of process fluid temperature

- 1 Clamp connection compatible to DIN 32676 series A up to DN50
- 2 Clamp connection compatible to DIN 32676 series A above DN50

**Clamp process connection according to DIN 32676 series C (Tri-Clamp)**

Fig. 10: Allowed process pressure as a function of process fluid temperature

- 1 Clamp connection compatible to DIN 32676 series C up to 2"
- 2 Clamp connection compatible to DIN 32676 series C above 2"

**Clamp process connection according to JIS/ISO 2852**

Fig. 11: Allowed process pressure as a function of process connection temperature

- 1 Clamp process connection compatible to JIS/ISO 2852 up to 2"
- 2 Clamp process connection compatible to JIS/ISO 2852 above 2"

**4.2.2 Secondary containment**

Some applications or environment conditions require secondary containment retaining the process pressure for increased safety. All Rotamass Total Insight have a secondary containment filled with inert gas. The typical burst pressure values of the secondary housing are defined in the table below.

**Typical burst pressure at room temperature**

| Burst pressure in bar (psi) |            |            |            |
|-----------------------------|------------|------------|------------|
| Hygenic 25                  | Hygenic 40 | Hygenic 50 | Hygenic 80 |
| 49 (710)                    |            |            |            |

### 4.3 Ambient conditions

Allowed ambient and storage temperature of Rotamass Total Insight depends on the below components and their own temperature limits:

- Sensor
- Transmitter
- Connecting cable between sensor and transmitter (for remote design type)

#### Ambient temperature

Device surrounding air temperature is considered as ambient temperature. If the device is operating outdoors make sure that the solar irradiation does not increase the surface temperature of the device higher than the allowed maximum ambient temperature. Transmitter display has limited legibility below -20 °C (-4 °F).

| Maximum ambient temperature range                         |                        |                            |
|---|------------------------|----------------------------|
| <b>integral type:</b>                                     |                        | -40 – 60 °C (-40 – 140 °F) |
| <b>remote type</b>  |                        |                            |

4.3.1 Allowed ambient temperature for sensor

The allowed ambient temperature of the sensor depends on the following product properties:

- Process fluid temperature, see *Process fluid temperature range* [▶ 9]
- Design type
  - Integral type
  - Remote type
- Connecting cable type (options L<sub>...</sub> and Y<sub>...</sub>)

The allowed combinations of process fluid and ambient temperature for the sensor are illustrated as gray areas in the diagrams below.

Allowed process fluid and ambient temperature ranges in hazardous areas depend on classifications defined by applications, refer to *Temperature specification in hazardous areas* [▶ 29].

Temperature range specification Standard, integral type

Fig. 12: Allowed process fluid and ambient temperatures, integral type for process connection type HS2 and HS9

$T_{amb}$  Ambient temperature  
 $T_{pro}$  Process fluid temperature

Fig. 13: Allowed process fluid and ambient temperatures, integral type for process connection type HS4 and HS8

Temperature range specification Standard, remote type

Fig. 14: Allowed process fluid and ambient temperatures, remote type for process connection type HS2 and HS9

- 1 Standard cable option L\_...
- 2 Limitation for fire retardant cable option Y\_...

Fig. 15: Allowed process fluid and ambient temperatures, remote type for process connection type HS4 and HS8

- 1 Standard cable option L\_...
- 2 Limitation for fire retardant cable option Y\_...

### 4.3.2 Temperature specification in hazardous areas

Please select appropriate equipment in accordance with the laws and regulations of the relevant country/region, when it is used in a location where explosive atmospheres may be present.

The maximum ambient and process fluid temperature of Integral type and Remote Sensor depending on explosion groups and temperature classes are related to different characteristics:

- Size of the sensor (model code Pos.3)
- Design and housing (model code Pos.10)
- Type of EX approval (model code Pos.11)
- Enhanced process fluid temperature (model code Pos.15: option "EPT")

Note: The maximum process fluid temperature could be further restricted due to process connection type see *Allowed ambient temperature for sensor* [▶ 26].

**Model code:**

**Pos. 2: H**

**Pos. 3: 25, 40**

**Pos. 10: 0, 2**

**Pos. 11: \_F21, \_F22, FF11, FF12**

**Pos. 15: –**

**Ex code: 7.66.66.68.54.10**

The following figure shows the relevant positions of the model code:

Tab. 6: Temperature classification

| Temperature class | Maximum ambient temperature<br>in °C (°F) | Maximum process fluid temperature<br>in °C (°F) |
|-------------------|---|---|
| T6                | 43 (109)                                  | 47 (116)  |
| T5                | 58 (136)                                  | 62 (143)  |
| T4                | 60 (140)                                  | 99 (210)  |
| T3                | 60 (140)                                  | 150 (302)                                       |
| T2                | 60 (140)                                  | 150 (302)                                       |
| T1                | 60 (140)                                  | 150 (302)                                       |

## 5 Mechanical specification

### 5.1 Design

The Rotamass Hygienic flow meter is available with two design types:

- Integral type, sensor and transmitter are firmly connected
- Remote type with standard neck

Fig. 16: Remote type sensor with standard neck

| Design type   | Design version    | Process fluid temperature range | Model code position 10 |
|---------------|-------------------|---------------------------------|------------------------|
| Integral type | Direct connection | Standard                        | 0, 2                   |
| Remote type   | Standard neck     |                                 | A, E, J                |

The design influences the temperature specification for Ex-approved Rotamass, see Explosion Proof Type Manual (IM 01U10X\_--00\_--R).

## 5.2 Material

### 5.2.1 Sensor

#### Material wetted parts

Sensor parts which are wetted by process fluid are available with the following materials:

| Material                    | Model code position 4 |
|-----------------------------|-----------------------|
| Stainless steel 1.4404/316L | S                     |

The customer is responsible to ensure chemical compatibility of the material of the wetted parts with the measured process fluid.

The measuring tubes used for manufacturing exhibits a surface roughness of  $Ra \leq 0.8 \mu\text{m}$ . Other parts as flow divider and process connections exhibit the same roughness.

#### Sensor housing material

Sensor housing is available in the following materials:

| Housing part | Material                    | Model code position 7 |
|--------------|-----------------------------|-----------------------|
| Junction box | Stainless steel 1.4404/316L | –                     |
| Neck         | Stainless steel 1.4308/304  | –                     |
| Body         | Stainless steel 1.4301/304  | 0                     |

### 5.2.2 Transmitter

#### Transmitter housing

The transmitter housing is available with different materials and coatings:

| Housing material          | Coating                      | Design type   | Model code position 10 |
|---------------------------|------------------------------|---------------|------------------------|
| Aluminum<br>Al-Si10Mg(Fe) | Standard coating             | Integral type | 0                      |
|                           |                              | Remote type   | A                      |
|                           | Corrosion protection coating | Integral type | 2                      |
|                           |                              | Remote type   | E                      |
| Stainless steel<br>CF8M   | –                            | Remote type   | J                      |
|                           | –                            |               |                        |

- Standard coating: Urethane-cured polyester powder coating
- Corrosion protection coating: Three-layer coating with high chemical resistance (polyurethane coating on two layers of epoxy coating)
- Color Mint green (Munsell 5.6BG3.3/2.9)

**Display window**

This is relevant for all transmitters having a display:

| Display material | Model code position 14 |
|------------------|------------------------|
| Glass            | 1                      |

**Bracket material**

The bracket is available for remote type devices only:

| Bracket material            | Design type | Model code position 10 |
|-----------------------------|-------------|------------------------|
| Stainless steel 1.4404/316L | Remote type | A, B, E, F, J, K       |

**5.2.3 Nameplates**

**Sensor**

| Sensor housing material | Process fluid temperature range | Sensor nameplate material |
|-------------------------|---------------------------------|---------------------------|
| 1.4301/304              | Standard                        | Polyester film            |

**Transmitter**

| Transmitter housing material | Transmitter nameplate material |
|------------------------------|--------------------------------|
| Aluminum AL-Si10MG(Fe)       | Foil                           |
| Stainless steel CF8M         | 1.4404/316L                    |

5.3 Process connections, dimensions and weights of sensor

Fig. 17: Dimensions in mm

Overall length L1 and weight

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the integral type: up to 3.2 kg (7.1 lb).

**Threaded connection compatible to DIN 11851**

Tab. 28: Overall length L1 and weight of sensor (process connections: DIN 11851 threaded)

| Process connections | Model code pos. |     | Hygienic 25     |                   | Hygienic 40     |                   | Hygienic 50     |                   | Hygienic 80     |                   |

## 6 Electrical specification

### 6.1 Power supply

#### Power supply

Alternating-current voltage (rms):

- Power supply<sup>1)</sup>: 24 V<sub>AC</sub> +20 % -15 % or 100 – 240 V<sub>AC</sub> +10 % -20 %
- Power frequency: 47 – 63 Hz

Direct-current voltage:

- Power supply<sup>1)</sup>: 24 V<sub>DC</sub> +20 % -15 % or 100 – 120 V<sub>DC</sub> +8.3 % -10 %

<sup>1)</sup> for option MC<sub>-</sub> (DNV approval) supply voltage is limited to 24 V; in addition NE21 testing indicates a tolerable area of 24 V<sub>DC</sub> ±20 % under NE21 test conditions.

#### Power consumption

P ≤ 10 W (including sensor)

#### Power supply failure

In the event of a power failure, the flow meter data are backed up on a non-volatile internal memory. In case of devices with display, the characteristic sensor values, such as nominal diameter, serial number, calibration constants, zero point, etc. and the error history are also stored on a microSD card.

#### Galvanic isolation

All circuits for inputs, outputs and power supply are galvanically isolated from each other.

### 6.2 Electrical interfaces

Depending on the selected interface protocol up to 4 in and/or outputs (I/O) are available, partially configurable.

| Model code position 13       | Interface protocol  | IO1 +/-                                | IO2 +/-                            | IO3 +/-      | IO4 +/-      |
|------------------------------|---------------------|--|------------------------------------|--------------|--------------|
| J <sub>-</sub>               | HART                | Active or Passive Analog Output + HART | Passive Pulse or Status Output     | Configurable | Configurable |
| M <sub>-</sub>               | Modbus              | Configurable                           |                                    | Modbus       |              |
| G <sub>-</sub> <sup>1)</sup> | PROFIBUS PA         | PROFIBUS PA                            | Passive Pulse Output <sup>2)</sup> | –            | –            |
| F <sub>-</sub> <sup>1)</sup> | FOUNDATION Fieldbus | FOUNDATION Fieldbus                    |                                    | –            | –            |

<sup>1)</sup>Only with Ultimate Transmitter

<sup>2)</sup>For calibration purpose only

Details about in and outputs and communication interfaces are specified in the following chapters.

**Spare Sensor I/O**

| Model code position 13 | Specification  |
|------------------------|--|
| NN                     | Spare sensor without transmitter, all communication types and I/Os apply |

**6.2.1 Analog inputs and outputs**

6.2.1.1 Analog outputs

**Active current output *lout***

One or two current outputs are available depending on model code position 13. Depending on the measured value, the active current output delivers 4 – 20 mA.

It may be used for output of the following measured values for example.

- Flow rate (mass, volume, net partial component flow of a mixture)
- Density
- Temperature
- Pressure
- Concentration

**NOTICE**

Please see Software Instruction Manual IM 01U10S0\_-00\_-R for further details.

For HART communication devices, it is supplied on the current output *lout1*. The current output may be operated in compliance with the NAMUR NE43 standard.

|   | Value         |
|---|---------------|
| Nominal output current range                  | 4 – 20 mA     |
| Maximum output current range                  | 2.4 – 21.6 mA |
| Load resistance                               | ≤ 750 Ω       |
| Load resistance for secure HART communication | 230 – 600 Ω   |

Fig. 20: Active current output connection *lout* HART

① Receiver

**Passive current output *lout***

|   | Value                     |
|---|---------------------------|
| Nominal output current range                  | 4 – 20 mA                 |
| Maximum output current range                  | 2.4 – 21.6 mA             |
| External power supply                         | 10.5 – 32 V <sub>DC</sub> |
| Load resistance for secure HART communication | 230 – 600 Ω               |
| Load resistance at current output             | ≤ 911 Ω                   |

Fig. 21: Maximum load resistance as a function of an external power supply voltage

- R Load resistance
- U External power supply voltage

The diagram shows the maximum load resistance R as a function of voltage U of the connected voltage source. Higher load resistances are allowed with higher power supply values. The usable zone for passive power output operation is indicated by the hatched area.

Fig. 22: Passive current output connection *lout*

6.2.1.2 Analog inputs

**Active current input *lin***

An individual analog power input is available for external analog devices.

The active current input *lin* is provided for connecting a two-wire transmitter with an output signal of 4 – 20 mA.

|                                   | Value                    |
|-----------------------------------|--------------------------|
| Nominal input current range       | 4 – 20 mA                |
| Maximum input current range       | 2.4 – 21.6 mA            |
| Internal power supply             | 24 V <sub>DC</sub> ±20 % |
| Internal load resistance Rotamass | ≤ 160 Ω                  |

Fig. 23: Connection of external device with passive current output

- ① External passive current output device

**Passive current input *lin***

The passive current input *lin* is provided for connecting a four-wire transmitter with an output signal of 4 – 20 mA.

|                                   | Value             |
|-----------------------------------|-------------------|
| Nominal input current range       | 4 – 20 mA         |
| Maximum input current range       | 2.4 – 21.6 mA     |
| Internal load resistance Rotamass | $\leq 160 \Omega$ |

Fig. 24: Connection of external device with active current output

- ① External active current output device

### 6.2.2 Digital inputs and outputs

#### 6.2.2.1 Digital outputs

##### Active pulse output *P/Sout*

Connection of an electronic counter

Maximum voltage and correct polarity must be observed for wiring.

| Terms                 | Value                    |
|-----------------------|--------------------------|
| Load resistance       | > 1 kΩ                   |
| Internal power supply | 24 V <sub>DC</sub> ±20 % |
| Maximum pulse rate    | 10000 pulses/s           |
| Frequency range       | 0 – 12.5 kHz             |

Fig. 25: Active pulse output connection *P/Sout*

- ① Load resistance
- ② Electronic counter

Connection of an electromechanical counter

| Terms                 | Value                    |
|-----------------------|--------------------------|
| Maximum current       | 150 mA                   |
| Average current       | ≤ 30 mA                  |
| Internal power supply | 24 V <sub>DC</sub> ±20 % |
| Maximum pulse rate    | 2 pulses/s               |
| Pulse width           | 20, 33, 50, 100 ms       |

Fig. 26: Active pulse output *P/Sout* connection with electromechanical counter

- ① Protective diode
- ② Electromechanical counter

**Active pulse output P/Sout with internal pull-up resistor**

|                           | Value                    |
|---------------------------|--------------------------|
| Internal power supply     | 24 V <sub>DC</sub> ±20 % |
| Internal pull-up resistor | 2.2 kΩ                   |
| Maximum pulse rate        | 10000 pulses/s           |
| Frequency range           | 0 – 12.5 kHz             |

Fig. 27: Active pulse output P/Sout with internal pull-up resistor

- ① Electronic counter

**Passive pulse output P/Sout**

Maximum voltage and correct polarity must be observed for wiring.

|                      | Value                |
|----------------------|----------------------|
| Maximum load current | ≤ 200 mA             |
| Power supply         | ≤ 30 V <sub>DC</sub> |
| Maximum pulse rate   | 10000 pulses/s       |
| Frequency range      | 0 – 12.5 kHz         |

Fig. 28: Passive pulse output connection P/Sout with electronic counter

- ① Passive pulse or status output
- ② Load resistance
- ③ Electronic counter

Fig. 29: Passive pulse output P/Sout connection with electromechanical counter

- ① Passive pulse or status output
- ② Protective diode
- ③ Electromechanical counter

**Active status output P/Sout**

Since this is a transistor contact, maximum allowed current as well as polarity and level of output voltage must be observed during wiring.

|                       | Value                    |
|-----------------------|--------------------------|
| Load resistance       | > 1 kΩ                   |
| Internal power supply | 24 V <sub>DC</sub> ±20 % |

Fig. 30: Active status output connection P/Sout

① External device with load resistance

**Active status output P/Sout with internal pull-up resistor**

|                           | Value                    |
|---------------------------|--------------------------|
| Internal pull-up resistor | 2.2 kΩ                   |
| Internal power supply     | 24 V <sub>DC</sub> ±20 % |

Fig. 31: Active status output P/Sout with internal pull-up resistor

① External device

**Passive status output P/Sout or Sout**

|                | Value                |
|----------------|----------------------|
| Output current | ≤ 200 mA             |
| Power supply   | ≤ 30 V <sub>DC</sub> |

Fig. 32: Passive status output connection P/Sout or Sout

① External device

Fig. 33: Passive status output connection *P/Sout* or *Sout* for solenoid valve circuit

- ① Relay
- ② Solenoid valve
- ③ Magnetic valve power supply
- ④ Protective diode

A relay must be connected in series to switch alternating voltage.

**Passive pulse or status output *P/Sout* (NAMUR)**

Output signals according to EN 60947-5-6 (previously NAMUR, worksheet NA001):

Fig. 34: Passive pulse or status output with switching amplifier connected in series

- ① Passive pulse or status output
- ② Switching amplifier

6.2.2.2 Digital inputs

**Status input *Sin***

Do not connect a signal source with electric voltage.

The status input is provided for use of voltage-free contacts with the following specification:

| Switching status | Resistance |
|------------------|------------|
| Closed           | < 200 Ω    |
| Open             | > 100 kΩ   |

Fig. 35: Status input connection

### 6.2.3 HART

For HART communication devices, it is supplied on the current output Iout1. The current output may be operated in compliance with the NAMUR NE43 standard. HART is available with non-intrinsically and intrinsically safety outputs.

#### HART I/O

| Model code position 13 | Connection terminal assignment |                    |                    |  |               |

- lout Analog current output, no HART
- lin Analog current input
- P/Sout1 Pulse or status output
- P/Sout2 Pulse or status output

Output Signal

Digital communication signal according to EIA485 standard (RS485).

6.2.5 PROFIBUS PA

PROFIBUS PA interface is available with and without intrinsically safety.

| Model code position 13 | Connection terminal assignment |                       |          |          |               |
|------------------------|--------------------------------|-----------------------|----------|----------|---------------|
|                        | I/O1 +/-                       | I/O2 +/-              | I/O3 +/- | I/O4 +/- | WP            |
| G0                     | PROFIBUS PA                    | Pulse<br>Passive      | –        | –        | Write-protect |
| G1                     | PROFIBUS PA (IS)               | Pulse<br>Passive (IS) | –        | –        | Write-protect |

PROFIBUS PA                      PA communication  
 Pulse Passive                    Pulse / Frequency output

Intrinsically safe (IS) outputs are only available in combination with selecting Ex approval of the device, see model code position 11 of the table in chapter *Model code description* [▶ 74].

Output Signal

Digital communication signal according to IEC 61158/61784.  
 Maximum voltage and correct polarity must be observed for wiring.

|              | Value                  |
|--------------|------------------------|
| Power supply | 9 – 32 V <sub>DC</sub> |
| Current draw | 15 mA (maximum)        |

Supported Functions

Profile PA Rev. 3.02 compliant, supporting:

- Condensed Status (NE107)
- Device identification number (IDENT\_NUMBER) adaption

| Function Blocks | Description |                      |
|-----------------|-------------|----------------------|
| Transducer      | FTB         | Flow                 |
|                 | CTB         | Concentration        |
|                 | LTB         | LCD Indicator        |

Supported Functions

Compliance to ITK6.3:

| Function Blocks | Description |                       |
|-----------------|-------------|-----------------------|
| Transducer      | FCB         | Flow                  |
|                 | CTB         | Concentration         |
|                 | LTB         | LCD Indicator         |
|                 | MTB         | Maintenance           |
|                 | ADTB        | Advanced Diagnostics  |
| Analog Input    | A11         | Mass flow             |
|                 | A12         | Density               |
|                 | A13         | Temperature           |
|                 | A14         | Volume flow           |
|                 | A15         | Reference density     |
|                 | A16         | Corrected volume flow |

| Function Blocks     | Description |  |
|---------------------|-------------|--|
| Integrator          | IT          | Depends on FOUNDATION Fieldbus configuration (up to 3) |
| Multi Analog Output | MAO         | Depends on FOUNDATION Fieldbus configuration           |

| ID     | Description  |
|--------|--------------|
| 594543 | Manufacturer |
| 0013   | Device Type  |

6.3 Display and microSD card

| Display attributes | Specifications            | Model code position 14 |
|--------------------|---------------------------|------------------------|
| Type               | 4-line dot-matrix display | 1                      |
| Resolution         | 128(W) x 64 (H) dots      |                        |
| Size               | 64.6 mm x 31.2 mm         |                        |
| Control            | via IR switches           |                        |

All of the functions described here are also available via digital communication. Numerical values that are entered via the display are limited to 6 digits for process variables and 8 digits for totalizer.

Fig. 38: Display layout

- |   |                                |   |              |
|---|--------------------------------|---|--------------|
| 1 | Measured quantities and units  | 4 | IR switches  |
| 2 | Status icon and time           | 5 | Alarm symbol |
| 3 | Measured quantity abbreviation |   |              |

The controls on the display are IR switches. They respond as soon as an object, such as a finger, is in close proximity. It is not necessary to apply pressure to the display surface.

Display unit

The display unit includes a slot for the microSD card.

| SD card attributes | Specifications                              |
|--------------------|---|
| Type               | Industrial Grade microSD card               |
| SD specification   | Compliant with SD Specification version 2.0 |
| Physical dimension | 15 mm x 11 mm x 1.0 mm (+/-0.1 mm)          |
| Capacity           | 1 GB  |
| Seq. Read (MB/s)   | 24.01                                       |
| Seq. Write (MB/s)  | 17.96                                       |

It is recommended to use the microSD card included with the Rotamass Total Insight. Functionality of the device cannot be guaranteed if other cards are used.

For status icon placement on the display see figure at *Display* [▶ 64], No. 1, 2 or 5.

## 6.4 Cable specifications

For remote type devices, a connecting cable has to be used to connect the sensor to the transmitter. The device specifications, stated in this document, are valid only if one of the original Rota Yokogawa connecting cables is used.

Cable length limitations to be considered:

| Cable type   | Option code | Maximum length to keep the specification | Maximum allowable length in hazardous areas |
|--|-------------|--|---|
| Standard connecting cable                            | L_...       | 30 m                                     | 171 m                                       |
| Fire retardant connecting cable with DNV certificate | Y_...       | 30 m                                     | 95 m  |

Cables longer than 30 m must be ordered as separate item. For this purpose please check the “Customer Maintenance Parts List” (CMPL 01U10B01-00EN-R) or consult our Yokogawa Service team.

## 7 Approvals and declarations of conformity

---

### CE marking

The Rotamass Total Insight meets the statutory requirements of the applicable EU Directives. By attaching the CE mark, Rota Yokogawa confirms conformity of the field instrument with the requirements of the applicable EU Directives. The EU Declaration of Conformity is enclosed with the product on a data carrier.

### Pressure equipment approvals

The Rotamass Total Insight is in compliance with the statutory requirements of the applicable EU Pressure Equipment Directive (PED) for fluid groups 1 and 2.

The customer is fully responsible of selecting proper materials which withstand corrosive or erosive conditions. In case of heavy corrosion and/or erosion the instrument may not withstand the pressure and an incident may happen with human and/or environmental harm. Yokogawa will not take any liability regarding damage caused by corrosion or erosion. If corrosion or erosion may happen, the user has to check periodically if the necessary wall thickness is still in place.

### RoHS and WEEE Intended Use

Rotamass Total Insight flow meter is intended to be sold and used in large-scale stationary industrial applications, large-scale fixed installation, means of transport vehicles for persons or goods, excluding two-wheel vehicles which are not type approved. The instrument should be disposed in accordance with applicable national legislations or regulations, respectively.

Details about all standards that are fulfilled are show in the tables below.

Not all options are available in all countries. For details please contact your local Yokogawa Sales Organization.

## 7.1 Legal equipment standards and norms

### Legal equipment standards and norms

| Approval type                       | Approval or certificate  |
|-------------------------------------|--|
| Electromagnetic Compatibility (EMC) | EU directive 2014/30/EU per EN 61326-1 Class A Table 2 and EN 61326-2-3 and EN 61328-2-5 (PROFIBUS PA, FOUNDATION Fieldbus)                  |
|                                     | RCM in Australia/New Zealand: Rotamass Total Insight meets the EMC requirements of the Australian Communications and Media Authority (ACMA). |
|                                     | KC mark in Korea   |
|                                     | TR CU 020 in EAEU area   |

## 8 Ordering information

### 8.1 Model code description

The model code of the Rotamass Total Insight is explained below.

Items 1 through 14 are mandatory entries and must be specified at the time of ordering.

Device options (item 15) can be selected and specified individually by separating them with slashes.

Basic model code (pos. 1-4)

Model code positions 5-14 (Mandatory items)

Model code position 15 (device options)

In general, the selection of one option per option group is possible. In option group „Calibration certificate“ all 3 options can be combined.

| Model code position            | Model code | Description  |
|--------------------------------|------------|--|
| <b>Transmitter</b>             |            |  |
| 1                              | E          | Essential (base function)  |
| 1                              | U          | Ultimate (high function)   |
| 1                              | N          | Spare sensor without transmitter, combinable with Rotamass TI transmitter          |
| <b>Sensor</b>                  |            |  |
| 2                              | H          | Hygienic   |
| <b>Meter size</b>              |            |  |
| 3                              | 25         | Nominal mass flow: 1.6 t/h (59 lb/min),<br>Maximum mass flow: 2.3 t/h (85 lb/min)  |
| 3                              | 40         | Nominal mass flow: 4.7 t/h (170 lb/min)<br>Maximum mass flow: 7 t/h (260 lb/min)   |
| 3                              | 50         | Nominal mass flow: 20 t/h (730 lb/min)<br>Maximum mass flow: 29 t/h (1100 lb/min)  |
| 3                              | 80         | Nominal mass flow: 51 t/h (1900 lb/min)<br>Maximum mass flow: 76 t/h (2800 lb/min) |
| <b>Material wetted parts</b>   |            |  |
| 4                              | S          | Stainless steel 1.4404/316L  |
| <b>Process connection size</b> |            |  |
| 5                              | 25         | DN25, 1 in.  |
| 5                              | 40         | DN40, 1½ in.   |
| 5                              | 50         | DN50, 2 in.  |
| 5                              | 65         | DN65, 2½ in.   |
| 5                              | 80         | DN80, 3 in.  |
| <b>Process connection type</b> |            |  |
| 6                              | HS2        | Threaded connection according to DIN 11851   |
| 6                              | HS4        | Clamp process connection according to DIN 32676 series A                           |
| 6                              | HS6        | Threaded connection compatible to SMS 1145   |

| Model code position                    | Model code | Description   |
|--|------------|---|
| 6                                      | HS8        | Clamp process connection according to DIN 32676 series C (Tri-Clamp)  |
| 6                                      | HS9        | Clamp process connection according to JIS G3447 / ISO 2852  |

### 8.3 Model code combinations

For complete product configuration, please refer to the FlowConfigurator online sizing and configuration tool: <http://www.FlowConfigurator.com>

#### AGA11 Declaration of Conformity

A certificate about AGA11 declaration of conformity will be issued with the following configuration.

| Model code position | Code         | Description   |
|---------------------|--------------|---|
| 9                   | 30, 50 or 70 | Mass flow accuracy for gases                            |
| 13                  | J_           | HART Interface  |
| 15                  | /K5          | Option Customer-specific 10-point mass flow calibration |
|                     | /TC          | Option Tube Health Check                                |

Please note: AGA11 declaration of conformity available with Rotamass Total Insight HART firmware rev.4 or later. For details please contact your local Yokogawa sales organization.

## 8.4 Ordering Instructions

Specify the following information when ordering a product:

### 8.4.1 Mandatory ordering instructions

The following information have to be specified when ordering a product:

- Model code
- Fluid name
- Rotamass TI is delivered with quick reference hardcopy, a compressed version of the general instruction manual. For delivery choose one of the languages below:
  - English
  - French
  - German
  - Japanese
  - Chinese
  - Korean
  - Russian

### 8.4.2 Optional ordering instructions

The following information depend on the product configuration and can or have to be selected.

#### Manual and display language

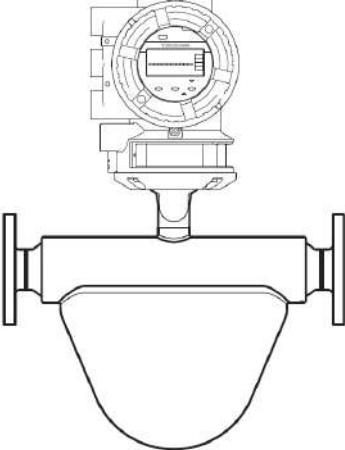

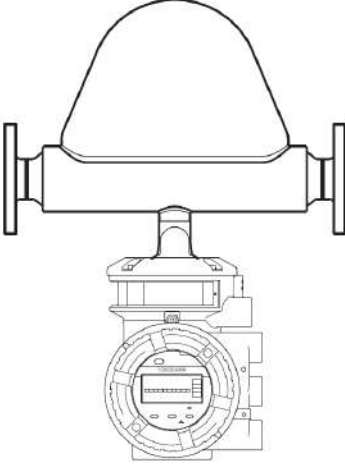

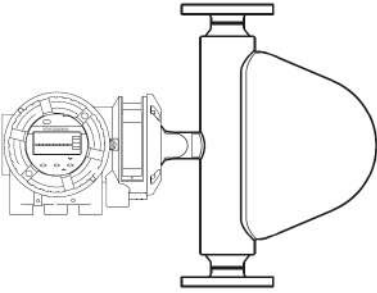

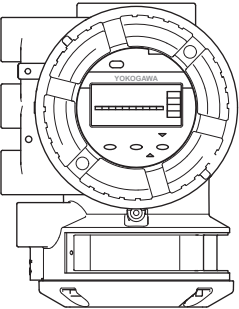

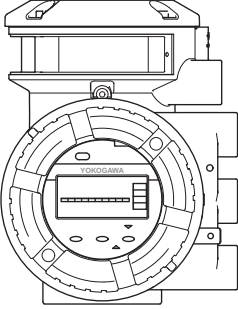

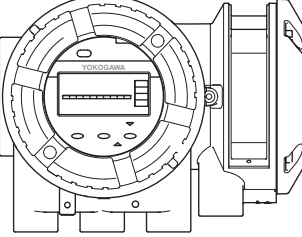

- Display language and units depend on the selected language pack:

| pack 1                | pack 2             | pack 3                |
|-----------------------|--------------------|-----------------------|
| EN-Pack1 - English    | EN-Pack2 - English | EN-Pack3 - English    |
| DE-Pack1 - German     | DE-Pack2 - German  | DE-Pack3 - German     |
| FR-Pack1 - French     | RU-Pack2 - Russian | FR-Pack3 - French     |
| PT-Pack1 - Portuguese | PL-Pack2 - Polish  | PT-Pack3 - Portuguese |
| IT-Pack1 - Italian    | KZ-Pack2 - Kazakh  | IT-Pack3 - Italian    |
| ES-Pack1 - Spanish    |                    | ES-Pack3 - Spanish    |
| JA-Pack1 - Japanese   |                    | CN-Pack3 - Chinese    |

- Unit notation on the display (display only present for value 1 on position 14 of the model code):
  - Metric units
  - Imperial units - US
  - Imperial units - GB
  - Russia specific units (only available with language pack 2)
  - Japan specific units (only available with language pack 1)

**Display orientation**

- When display is ordered, its orientation has to be specified.

|               | Orientation 1   | Orientation 2  | Orientation 3  |
|---------------|---|--|--|
| Integral type | <p>Horizontal installation - tubes down</p>  | <p>Horizontal installation - tubes up</p>  | <p>Vertical installation</p>  |
| Remote type   |   |    |                              |

In the above the figure, the housing of the Prime sensor is shown. The design of sensor depends on the chosen series.

The parameter "Installation Orientation" in transmitter must be set by the customer according to the installation direction of the sensor.

**Serial and tag number, customer name**

- Tag No. engraved on the nameplate and mentioned on the calibration certificate (option BG, up to 17 characters length)
- Software Tag No.: short and long (short tag no. mentioned also on the calibration certificate):

| Parameter   | Value   |
|---|---|
| HART Tag No. (short):<br>up to 8 characters length (Capital letters only) | Default value has 8 space characters              |
| HART Tag No. (long):<br>up to 32 characters length                        | Default value has 32 space characters             |
| PROFIBUS PA NODE ADDRESS (HEX):<br>up to 2 characters length              | Default value '0x7E' unless otherwise specified   |
| PROFIBUS PA SOFTWARE TAG:<br>up to 32 characters length                   | Default value 'FT2001' unless otherwise specified |
| FOUNDATION Fieldbus NODE ADDRESS (HEX):<br>up to 2 characters length      | Default value '0xF6' unless otherwise specified   |
| FOUNDATION Fieldbus SOFTWARE TAG:<br>up to 32 characters length           | Default value 'FT2004' unless otherwise specified |

Specify the following information when ordering option /SNC for a Spare Transmitter RCUXNNN:

- Serial number of the transmitter to be replaced.
- Customer name for the certificates (option L2, L3, L4: up to 40 characters length)

**Concentration measurement**

In case advanced concentration measurement with predefined sets (option AC1, AC4) is ordered, at least one of the following sets have to be selected:

- C01 Sugar / Water 0 – 85 °Bx, 0 – 80 °C
- C02 NaOH / Water 2 – 50 WT%, 0 – 100 °C
- C03 KOH / Water 0 – 60 WT%, 54 – 100 °C
- C04 NH<sub>4</sub>NO<sub>3</sub> / Water 1 – 50 WT%, 0 – 80 °C
- C05 NH<sub>4</sub>NO<sub>3</sub> / Water 20 – 70 WT%, 20 – 100 °C
- C06 HCl / Water 22 – 34 WT%, 20 – 40 °C
- C07 HNO<sub>3</sub> / Water 50 – 67 WT%, 10 – 60 °C
- C09 H<sub>2</sub>O<sub>2</sub> / Water 30 – 75 WT%, 4 – 44 °C
- C10 Ethylene Glycol / Water 10 – 50 WT%, -20 – 40 °C
- C11 Amylum = starch / Water 33 – 43 WT%, 35 – 45 °C
- C12 Methanol / Water 35 – 60 WT%, 0 – 40 °C
- C20 Alcohol / Water 55 – 100 VOL%, 10 – 40 °C
- C21 Sugar / Water 40 – 80 °Bx, 75 – 100 °C
- C30 Alcohol / Water 66 – 100 WT%, 15 – 40 °C
- C37 Alcohol / Water 66 – 100 WT%, 10 – 40 °C

---
